

Figure and source-table correspondence

Analysis source identifiers and filenames in Additional file 3 preserve the provenance of the numerical data. The following crosswalk identifies their final manuscript locations. Source filenames are identifiers, rather than final figure citations. The complete 89-row worksheet-cell map is provided in Additional file 9.

Analysis source scope	Final figure and panel scope
Figure 1, A–J	Main Figure 1, B–K
Figure 2, A–J	Main Figure 2, A–J
Figure 3, A–J	Main Figure 3, A–J
Figure 4, A–J (liver localization and calibration)	Supplementary Figure S12, B–K
Figure 5, A–L (integration)	Main Figure 5, B–M
Figure 6, A–L (independent hepatic evaluation)	Main Figure 6, B–M
Supplementary Figures S1–S10	Supplementary Figures S1–S10
PXD052594 phosphoproteome sensitivity	Table-only results in Additional file 3

Panel A of Main Figures 1, 5 and 6 and Figure S12 presents the relevant workflow. The biochemical Main Figure 4 is supported by Additional files 4–6. It is distinct from the source-localization figure identified as Figure 4 in the source workbook.

Compound-screening sources

Supplementary table	Content and figure use
N20	Compound library and clinical context (Figure 7)
N21	All 32 AI-screening dispositions (Figure 7B,C)
N22–N23	96 primary searches and 32 summaries (Figure S13A–D)
N24	48 molecular-property predictions (Figure S14A–C)
N25–N26	Activity disposition and endpoint summaries (Figure S13E)
N27	Source-matched dissociation constants (Figure 7A)

Additional file 9 contains the Figure S13F pose-level distances, the six primary/apo PDGFRA top-pose comparisons in Figure S14F, all 53 retained PDGFRA sensitivity poses, receptor definitions and exact model inputs. The three apo searches are separate from the 96 primary searches in Table N22. Current legends for S11–S12 are in Additional file 4; those for S13–S14 are in Additional file 7.
